## TRACKING TEST $\mathbf{2}^{1 ⁄ 2}$

Name.

| Question | Max | Score |
| :---: | :---: | :---: |
| 1 | 13 |  |
| 2 | 13 |  |
| 3 | 11 |  |
| 4 | 12 |  |
| 5 | 9 |  |
| 6 | 9 |  |
| 7 | 8 |  |
| TOTAL | 75 |  |
| PERCENTAGE | 100 |  |

1. (a) Find $\int \tan ^{2} x d x$.
(b) Use integration by parts to find $\int \frac{1}{x^{3}} \ln x \mathrm{~d} x$.
(4)
(c) Use the substitution $u=1+\mathrm{e}^{x}$ to show that

$$
\int \frac{\mathrm{e}^{3 x}}{1+\mathrm{e}^{x}} \mathrm{~d} x=\frac{1}{2} \mathrm{e}^{2 x}-\mathrm{e}^{x}+\ln \left(1+\mathrm{e}^{x}\right)+k
$$

where $k$ is a constant.
$\qquad$
2. (a) (i) By writing $3 \theta=(2 \theta+\theta)$, show that

$$
\begin{equation*}
\sin 3 \theta=3 \sin \theta-4 \sin ^{3} \theta . \tag{4}
\end{equation*}
$$

(ii) Hence, or otherwise, for $0<\theta<\frac{\pi}{3}$, solve

$$
8 \sin ^{3} \theta-6 \sin \theta+1=0
$$

Give your answers in terms of $\pi$.
(b) Using $\sin (\theta-\alpha)=\sin \theta \cos \alpha-\cos \theta \sin \alpha$, or otherwise, show that

$$
\begin{equation*}
\sin 15^{\circ}=\frac{1}{4}(\sqrt{6}-\sqrt{ } 2) \tag{4}
\end{equation*}
$$

3. $\mathrm{f}(x)=3 x \mathrm{e}^{x}-1$.

The curve with equation $y=\mathrm{f}(x)$ has a turning point $P$.
(a) Find the exact coordinates of $P$.

The equation $\mathrm{f}(x)=0$ has a root between $x=0.25$ and $x=0.3$.
(b) Use the iterative formula $\quad x_{n+1}=\frac{1}{3} \mathrm{e}^{-x_{n}}$. with $x_{0}=0.25$ to find, to 4 decimal places, the values of $x_{1}, x_{2}$ and $x_{3}$.
(c) By choosing a suitable interval, show that a root of $\mathrm{f}(x)=0$ is $x=0.2576$ correct to 4 decimal places.

4. (a) Express $3 \cos \theta+4 \sin \theta$ in the form $R \cos (\theta-\alpha)$,
where $R$ and $\alpha$ are constants, $R>0$ and $0<\alpha<90^{\circ}$.
(b) Hence find the maximum value of $3 \cos \theta+4 \sin \theta$ and the smallest positive value of $\theta$ for which this maximum occurs.

The temperature, $\mathrm{f}(t)$, of a warehouse is modelled using the equation

$$
\mathrm{f}(t)=10+3 \cos (15 t)^{\circ}+4 \sin (15 t)^{\circ}
$$

where $t$ is the time in hours from midday and $0 \leq t<24$.
(c) Calculate the minimum temperature of the warehouse as given by this model.
(d) Find the value of $t$ when this minimum temperature occurs.

5. A curve is described by the equation

$$
x^{3}-4 y^{2}=12 x y .
$$

(a) Find the coordinates of the two points on the curve where $x=-8$.
(b) Find the gradient of the curve at each of these points.

Figure 1
Figure 1 shows a ladder $A B$, of mass 25 kg and length 4 m , resting in equilibrium with one end $A$ on rough horizontal ground and the other end $B$ against a smooth vertical wall. The ladder is in a vertical plane perpendicular to the wall. The coefficient of friction between the ladder and the ground is $\frac{11}{25}$. The ladder makes an angle $\beta$ with the ground. When Reece, who has mass 75 kg , stands at the point $C$ on the ladder, where $A C=2.8 \mathrm{~m}$, the ladder is on the point of slipping. The ladder is modelled as a uniform rod and Reece is modelled as a particle.
(a) Find the magnitude of the frictional force of the ground on the ladder.
(b) Find, to the nearest degree, the value of $\beta$.

7. The heights of a group of athletes are modelled by a normal distribution with mean 180 cm and a standard deviation 5.2 cm . The weights of this group of athletes are modelled by a normal distribution with mean 85 kg and standard deviation 7.1 kg .
Find the probability that a randomly chosen athlete
(a) is taller than 188 cm ,
(b) weighs less than 97 kg .
(c) Assuming that for these athletes height and weight are independent, find the probability that a randomly chosen athlete is taller than 188 cm and weighs more than 97 kg .
